

Weigh Belt Feeders for the Building Products Industry

Web Tech AutoWeigh have been supplying weigh belt feeders to the building products industry for over 25 years. Handling products such as sand, cement, calcined plaster, vermiculite, flyash and limestone, we have a range of standard models suitable for nearly any application. We have also modified the standard designs to suit existing plant requirements, or to replace existing old equipment.

We can offer open, partially enclosed or fully enclosed type constructions, fabricated from mild steel or stainless steel.

As well as the mechanical aspects of the weigh belt feeders, Web Tech AutoWeigh design and manufacture its own range of electronic integrators and controllers. As well as providing standard information such as rate and total, additional options such as serial communication boards, calibration audit trails and control outputs are available. Special applications requiring high turn-down ratios can be provided with servo drive motors and the associated controllers. Contact us to see what we can offer for your application.
