

Weigh Belt Feeders for the Cement Industry

Web Tech AutoWeigh have been supplying weigh belt feeders to the cement industry for over 25 years. Handling products such as clinker, cement, gypsum and limestone, we have a range of standard models suitable for nearly any application. We have also modified the standard designs to suit existing plant requirements, or to replace existing old equipment.

We can offer open, partially enclosed or fully enclosed type constructions, fabricated from mild steel or stainless steel. Options such as scavenger scrapers in the bottom of the enclosure are available.

As well as the mechanical aspects of the weigh belt feeders, Web Tech AutoWeigh design and manufacture its own range of electronic integrators and controllers. As well as providing standard information such as rate and total, additional options such as serial communication boards, calibration audit trails and control outputs are available. Special applications requiring high turn-down ratios can be provided with servo drive motors and the associated controllers. Contact us to see what we can offer for your application.
